

## Uze Parts E commerce website for used car parts

The major goal of this app is to provide customers with the choice of purchasing second-hand vehicle components compared to OEM parts, which may save them a lot of money. Most people nowadays prefer used automobiles over new vehicles since they are less expensive and more budget-friendly. However, some consumers do not want to spend the majority of their money on spare parts, thus this may be a better solution for them.

- ◆ First, the user will be able to reach the homepage, where he or she will have the choice of searching for the product directly or browsing through the categories to find it.
- ◆ There will be categories of spare parts as it would be easier for user to find parts easily.
- ◆ After selecting the products, they will be added to the cart, and the user will be required to log in before proceeding to checkout.
- ◆ If the user is already logged in, he will be sent to the secure payment portal.
- ◆ If the user is new to the website, he or she must register a new account before proceeding with the purchase of parts.

- ◆ The parts will have a description, high quality images of the product, ratings and reviews of the product and information that how many people have bought this product before.
- ◆ Discount can be provided to regular customers, option for retails sales as well as wholesale purchases.
- ◆ Invoice generated for the purchase made can be sent to the mail of the user given during account creation.

### **User Groups**

Admin will be responsible for adding new products, and editing the price and details of the existing products.

The users targeted here are the ones owning used cars, having collectibles and for cars whose support has been stopped by the manufacturers.

Another group are the shop owners who get request for the particular parts and they arrange it through the website.
